Hello and welcome to the Kabetogama Sanitary Sewer Collection and Treatment Project Status Update. In this and later issues, we will be updating you periodically on the status of this project.

## Happening Now

As indicated in the last Project Status Update letter, we plan to have some work done throughout the project area before things get too cold. This letter will provide an update on what is scheduled to be completed in November.

The archeologist performing the archeological review of the project area has continued her progress. This review will be completed by November 7th.

Braun Intertec will be performing soil borings at the approximate locations of grinder stations. This work will begin on November 10<sup>th</sup> and continue throughout that week. They will drill a single boring to depth of refusal at the locations of the flagged stakes on your properties. This will provide a sense of what is taking place below the ground at each of these locations for ourselves to continue the design. As a reminder, please don't move stakes on your property.

Finally, our surveyors will be present after soil borings are completed to mark the final staked locations so that we know exactly where each boring was performed.

For anyone that was unable to fill out the temporary license forms this summer, there is still time. We plan to finish the archeological review and have another round of soil borings performed next spring and summer of 2026.

That will wrap up activities throughout the project area this year. Please look forward to additional project details in the upcoming Project Status Updates and do not hesitate to reach out if you have any questions.
